

PRODUCT DESCRIPTION

The SGM8091/8093(single), SGM8092 (dual), SGM8094 (quad) are rail-to-rail output voltage feedback amplifiers offering ease of use and low cost. They have bandwidth and slew rate typically found in current feedback amplifiers. All have a wide input common-mode voltage range and output voltage swing, making them easy to use on single supplies as low as 2.5V.

Despite being low cost, the SGM8091 series provide excellent overall performance. They offer wide bandwidth to 350MHz (G=+1) along with 0.1 dB flatness out to 125MHz (G = +1) and offer a typical low power of 4.3mA/amplifier.

The SGM8091 series are low distortion and fast settling make them ideal for buffering high speed A/D or D/A converters. The SGM8093 has a power-down disable feature that reduces the supply current to 75µA. These features make the SGM8093 ideal for portable and battery-powered applications where size and power are critical. All are specified over the extended -40°C to +125°C temperature range.

PIN CONFIGURATIONS (Top View)

FEATURES

- Rail-to-Rail Output
2mV Typical V_{OS}
- High Speed
350MHz, -3dB Bandwidth (G = +1)
265V/µs, Slew Rate
32ns Settling Time to 0.1% with 2V Step
- Operates on 2.5V to 5.5V Supplies
- Input Voltage Range = -0.2V to +3.8V with $V_S = 5V$
- Excellent Video Specs ($R_L = 150\Omega$, G = +2)
Gain Flatness 0.1dB to 70MHz
Diff Gain: 0.004%, Diff Phase: 0.08 degree
- Low Power
4.3mA/Amplifier Typical Supply Current
SGM8093 75µA when Disabled
- Small Packaging
SGM8091 Available in SO-8 and SOT23-5
SGM8092 Available in SO-8 and MSOP-8
SGM8093 Available in SO-8 and SOT23-6
SGM8094 Available in SO-14 and TSSOP-14

APPLICATIONS

- Imaging
- Photodiode Preamp
- Professional Video and Cameras
- Hand Sets
- DVD/CD
- Base Stations
- Filters
- A-to-D Driver

PACKAGE/ORDERING INFORMATION

| MODEL | ORDER NUMBER | PACKAGE DESCRIPTION | PACKAGE OPTION | MARKING INFORMATION |

| SGM8091 | SGM8091XN5/TR | SOT23-5 | Tape and Reel, 3000 | 8091 |
| | SGM8091XS/TR | SO-8 | Tape and Reel, 2500 | SGM8091XS |
| SGM8092 | SGM8092XS/TR | SO-8 | Tape and Reel, 2500 | SGM8092XS |
| | SGM8092XMS/TR | MSOP-8 | Tape and Reel, 3000 | SGM8092XMS |
| SGM8093 | SGM8093XN6/TR | SOT23-6 | Tape and Reel, 3000 | 8093 |
| | SGM8093XS/TR | SO-8 | Tape and Reel, 2500 | SGM8093XS |
| SGM8094 | SGM8094XS14/TR | SO-14 | Tape and Reel, 2500 | SGM8094XS14 |
| | SGM8094XTS14/TR | TSSOP-14 | Tape and Reel, 3000 | SGM8094XTS14 |

ABSOLUTE MAXIMUM RATINGS

| | | | |
|---|-----------------|--|---------|
| Supply Voltage, V+ to V- | 7.5V | SOT23-6, θ_{JA} | 190°C/W |
| Common-Mode Input Voltage.....(-V _S) - 0.5V to (+V _S) +0.5V | | SO-8, θ_{JA} | 125°C/W |
| Storage Temperature Range | -65°C to +150°C | MSOP-8, θ_{JA} | 216°C/W |
| Junction Temperature | 160°C | Lead Temperature Range (Soldering 10 sec)..... | 260°C |
| Operating Temperature Range | -55°C to +150°C | ESD Susceptibility | |
| Package Thermal Resistance @ T _A = 25°C | | HBM..... | 1000V |
| SOT23-5, θ_{JA} | 190°C/W | MM..... | 400V |

NOTE:

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

SGMICRO reserves the right to make any change in circuit design, specification or other related things if necessary without notice at any time. Please contact SGMICRO sales office to get the last datasheet.

ELECTRICAL CHARACTERISTICS: $V_S = +5V$

($G=+2$, $R_F = 600\Omega$, $R_L = 150\Omega$, unless otherwise noted.)

APPLICATION NOTES

Driving Capacitive Loads

The SGM809x family is optimized for bandwidth and speed, not for driving capacitive loads. Output capacitance will create a pole in the amplifier's feedback path, leading to excessive peaking and potential oscillation. If dealing with load capacitance is a requirement of the application, the two strategies to consider are (1) using a small resistor in series with the amplifier's output and the load capacitance and (2) reducing the bandwidth of the amplifier's feedback loop by increasing the overall noise gain.

Figure 1 shows a unity gain follower using the series resistor strategy. The resistor isolates the output from the capacitance, and more importantly, creates a zero in the feedback path that compensates for the pole created by the output capacitance.

Figure 1. Series Resistor Isolating Capacitive Load

Power-Supply Bypassing and Layout

The SGM809x family operates from either a single +2.7V to +5.5V supply or dual $\pm 1.35V$ to $\pm 2.75V$ supplies. For single-supply operation, bypass the power supply V_{DD} with a $0.1\mu F$ ceramic capacitor which should be placed close to the V_{DD} pin. For dual-supply operation, both the V_{DD} and the V_{SS} supplies should be bypassed to ground with separate $0.1\mu F$ ceramic capacitors. $2.2\mu F$ tantalum capacitor can be added for better performance.

Good PC board layout techniques optimize performance by decreasing the amount of stray capacitance at the op amp's inputs and output. To decrease stray capacitance, minimize trace lengths and widths by placing external components as close to the device as possible. Use surface-mount components whenever possible.

For the high speed operational amplifier, soldering the part to the board directly is strongly recommended. Try to keep the high frequency big current loop area small to minimize the EMI (electromagnetic interfacing).

Figure 2. Amplifier with Bypass Capacitors

Grounding

A ground plane layer is important for high speed circuit design. The length of the current path speed currents in an inductive ground return will create an unwanted voltage noise. Broad ground plane areas will reduce the parasitic inductance.

Input-to-Output Coupling

To minimize capacitive coupling, the input and output signal traces should not be parallel. This helps reduce unwanted positive feedback.

TYPICAL APPLICATION CIRCUITS

Differential Amplifier

The circuit shown in Figure 3 performs the difference function. If the resistors ratios are equal ($R_4 / R_3 = R_2 / R_1$), then $V_{OUT} = (V_p - V_n) \times R_2 / R_1 + V_{REF}$.

Figure 3. Differential Amplifier

Driving Video

The SGM809x can be used in video applications like in Figure 5.

Figure 5. Typical Video Driving

Low Pass Active Filter

The low pass filter shown in Figure 4 has a DC gain of $(-R_2/R_1)$ and the -3dB corner frequency is $1/2\pi R_2 C$. Make sure the filter is within the bandwidth of the amplifier. The Large values of feedback resistors can couple with parasitic capacitance and cause undesired effects such as ringing or oscillation in high-speed amplifiers. Keep resistors value as low as possible and consistent with output loading consideration.

Figure 4. Low Pass Active Filter
