

MMC, SD CARD, Memory Stick™ VOLTAGE-TRANSLATION TRANSCEIVER WITH ESD PROTECTION AND EMI FILTERING

 Check for Samples: [TXS0206](#)

FEATURES

- **Level Translator**
 - V_{CCA} and V_{CCB} Range of 1.1 V to 3.6 V
 - Fast Propagation Delay (4 ns Max When Translating Between 1.8 V and 3 V)
- **Integrated EMI Filtering and ESD Protection Circuitry**
- **ESD Protection Exceeds JESD 22 (A Port)**
 - 2500-V Human-Body Model (A114-B)
 - 250-V Machine Model (A115-A)
 - 1500-V Charged-Device Model (C101)
- **±8-kV Contact Discharge IEC 61000-4-2 ESD (B-port)**

**YFP PACKAGE
(TOP VIEW)**

DESCRIPTION/ORDERING INFORMATION

The TXS0206 is a level shifter for interfacing microprocessors with MultiMediaCards (MMCs), secure digital (SD) cards, and Memory Stick™ cards. It includes a high-speed level translator along with ESD protection and EMI filtering circuitry.

The voltage-level translator has two supply voltage pins. V_{CCA} as well as V_{CCB} can be operated over the full range of 1.1 V to 3.6 V. The TXS0206 enables system designers to easily interface applications processors or digital basebands to memory cards and SDIO peripherals operating at a different I/O voltage level.

Memory card standards recommend high-ESD protection for devices that connect directly to the external memory card. To meet this need, the TXS0206 incorporates ±8-kV Contact Discharge protection on the card side.

The TXS0206 is offered in a 20-bump wafer chip scale package (WCSP). This package has dimensions of 1.96 mm × 1.56 mm, with a 0.4-mm ball pitch for effective board-space savings. Memory cards are widely used in mobile phones, PDAs, digital cameras, personal media players, camcorders, set-top boxes, etc. Low static power consumption and small package size make the TXS0206 an ideal choice for these applications.

ORDERING INFORMATION⁽¹⁾

T_A	PACKAGE ⁽²⁾		ORDERABLE PART NUMBER	TOP-SIDE MARKING ⁽³⁾
–40°C to 85°C	WCSP – YFP (Pb-free)	Tape and reel	TXS0206YFPR	___3T_

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.

(2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

(3) YFP: The actual top-side marking has three preceding characters to denote year, month, and sequence code, and one following character to designate the assembly/test site. Pin 1 identifier indicates solder-bump composition (1 = SnPb, • = Pb-free).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

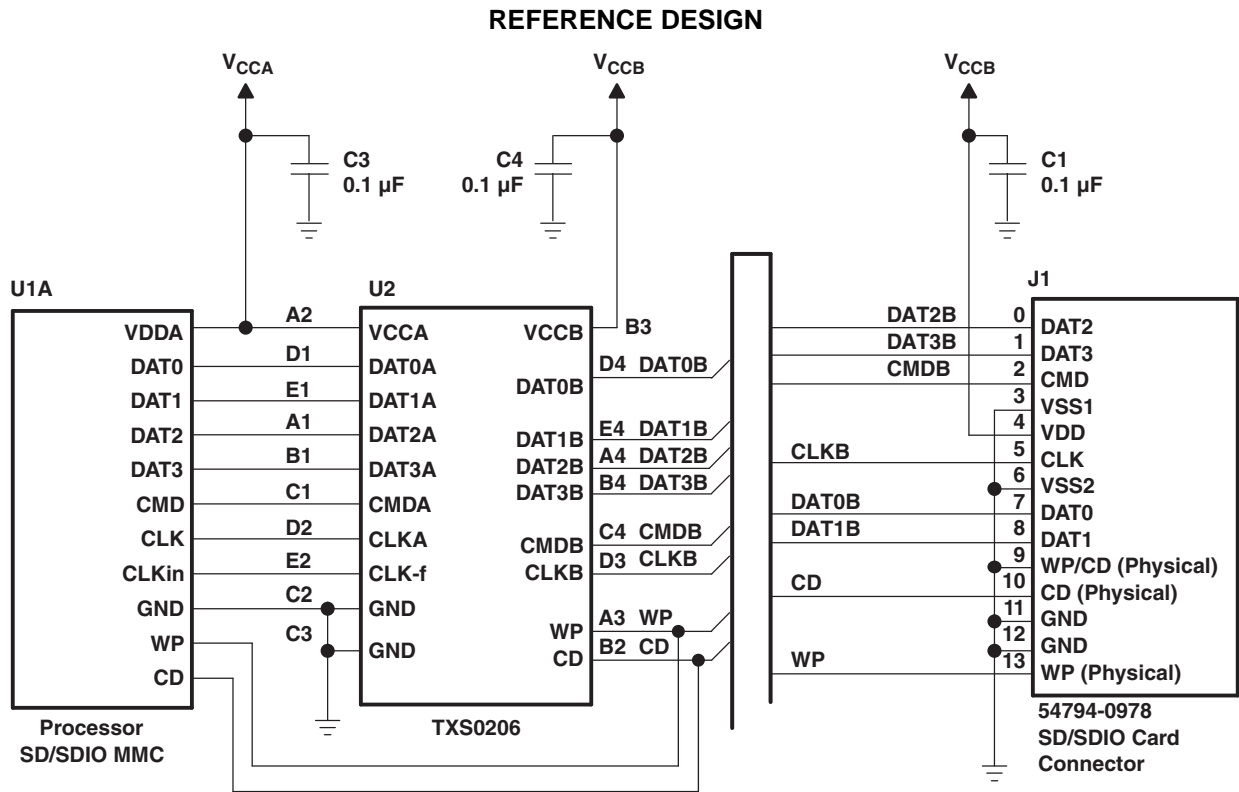

Figure 1. Interfacing With SD/SDIO Card

NOTE: The TXS0206 has integrated pullup resistor values that dynamically change value depending on whether a low or high signal is being transmitted through the device. When the output is low, the TXS0206 internal pullup value is 40 k Ω , and when the output is high, the internal pullup value change to a value of 4 k Ω . For MSA and MSH Memory Stick™ memory cards, to ensure that a valid V_{IH} (i.e., receiver input voltage high) is achieved, the internal pulldown resistors for these memory cards are not smaller than a 10-k Ω value. See the *Application Information* section of this data sheet, which explains the impact of adding too heavy (i.e., <10-k Ω value) of a pulldown resistor to the data lines of the TXS0206 device and the resulting 4-k Ω pullup/10-k Ω pulldown voltage divider network, which has a direct impact on the V_{IH} of the signal being sent into the Memory Stick™.

TERMINAL FUNCTIONS

TERMINAL		TYPE	DESCRIPTION
NO.	NAME		
A1	DAT2A	I/O	Data bit 2 connected to host. Referenced to V_{CCA} . Includes a 40-k Ω pullup resistor to V_{CCA} .
A2	V_{CCA}	Pwr	A-port supply voltage. V_{CCA} powers all A-port I/Os and control inputs.
A3	WP	O	Connected to write protect on the mechanical connector. The WP pin has an internal 100-k Ω pullup resistor to V_{CCA} .
A4	DAT2B	I/O	Data bit 2 connected to memory card. Referenced to V_{CCB} . Includes a 40-k Ω pullup resistor to V_{CCB} .
B1	DAT3A	I/O	Data bit 3 connected to host. Referenced to V_{CCA} . Includes a 40-k Ω pullup resistor to V_{CCA} .
B2	CD	O	Connected to card detect on the mechanical connector. The CD pin has an internal 100-k Ω pullup resistor to V_{CCA} .
B3	V_{CCB}	Pwr	B-port supply voltage. V_{CCB} powers all B-port I/Os.
B4	DAT3B	I/O	Data bit 3 connected to memory card. Referenced to V_{CCB} . Includes a 40-k Ω pullup resistor to V_{CCB} .
C1	CMDA	I/O	Command bit connected to host. Referenced to V_{CCA} . Includes a 40-k Ω pullup resistor to V_{CCA} .
C2, C3	GND		Ground
C4	CMDB	I/O	Command bit connected to memory card. Referenced to V_{CCB} . Includes a 40-k Ω pullup resistor to V_{CCB} .
D1	DAT0A	I/O	Data bit 0 connected to host. Referenced to V_{CCA} . Includes a 40-k Ω pullup resistor to V_{CCA} .
D2	CLKA	I	Clock signal connected to host. Referenced to V_{CCA} .
D3	CLKB	O	Clock signal connected to memory card. Referenced to V_{CCB} .
D4	DAT0B	I/O	Data bit 0 connected to memory card. Referenced to V_{CCB} . Includes a 40-k Ω pullup resistor to V_{CCB} .
E1	DAT1A	I/O	Data bit 1 connected to host. Referenced to V_{CCA} . Includes a 40-k Ω pullup resistor to V_{CCA} .
E2	CLK-f	O	Clock feedback to host for resynchronizing data to a processor. Leave unconnected if not used.
E3	EN	I	Enable/disable control. Pull EN low to place all outputs in Hi-Z state. Referenced to V_{CCA} .
E4	DAT1B	I/O	Data bit 1 connected to memory card. Referenced to V_{CCB} . Includes a 40-k Ω pullup resistor to V_{CCB} .

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

Level Translator

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT	
V _{CCA}	Supply voltage range	-0.5	4.6	V	
V _{CCB}	Supply voltage range	-0.5	4.6	V	
V _I	Input voltage range	I/O ports (A port)	-0.5	4.6	V
		I/O ports (B port)	-0.5	4.6	
		Control inputs	-0.5	4.6	
V _O	Voltage range applied to any output in the high-impedance or power-off state	A port	-0.5	4.6	V
		B port	-0.5	4.6	
V _O	Voltage range applied to any output in the high or low state	A port	-0.5	4.6	V
		B port	-0.5	4.6	
I _{IK}	Input clamp current	V _I < 0	-50	mA	
I _{OK}	Output clamp current	V _O < 0	-50	mA	
I _O	Continuous output current		±50	mA	
	Continuous current through V _{CCA} or GND		±100	mA	
T _{stg}	Storage temperature range	-65	150	°C	

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

THERMAL IMPEDANCE RATINGS

		UNIT
θ _{JA}	Package thermal impedance ⁽¹⁾	117 °C/W

(1) The package thermal impedance is calculated in accordance with JESD 51-7.

RECOMMENDED OPERATING CONDITIONS⁽¹⁾

PARAMETER MEASUREMENT INFORMATION

DATA RATE, PULSE DURATION, PROPAGATION DELAY, OUTPUT RISE AND FALL TIME MEASUREMENT USING A PUSH-PULL DRIVER

DATA RATE, PULSE DURATION, PROPAGATION DELAY, OUTPUT RISE AND FALL TIME MEASUREMENT USING AN OPEN-DRAIN DRIVER

LOAD CIRCUIT FOR ENABLE/DISABLE TIME MEASUREMENT

TEST	S1
t_{PZL}/t_{PLZ}	$2 \times V_{CCO}$
t_{PHZ}/t_{PZH}	Open

- C_L includes probe and jig capacitance.
- Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
- All input pulses are supplied by generators having the following characteristics: $PRR \leq 10$ MHz, $Z_O = 50 \Omega$, $dv/dt \geq 1$ V/ns.
- The outputs are measured one at a time, with one transition per measurement.
- t_{PZL} and t_{PHZ} are the same as t_{dis} .
- t_{PZL} and t_{PZH} are the same as t_{en} .
- t_{PLH} and t_{PHL} are the same as t_{pd} .
- V_{CCI} is the V_{CC} associated with the input port.
- V_{CCO} is the V_{CC} associated with the output port.
- All parameters and waveforms are not applicable to all devices.

PARAMETER MEASUREMENT INFORMATION (continued)

Figure 8. Load Circuit and Voltage Waveforms

APPLICATION INFORMATION

The TXS0206 has integrated pullup resistors on the data and command ports and their values dynamically change. When the port is in a low signal state, there is a nominal pullup resistor value of 40 k Ω , and power consumption is minimized. When the port is in a high signal state, the nominal pullup resistor value changes to 4 k Ω , and simultaneous switching performance is improved as a result. The threshold at which the resistance changes is approximately $V_{CC}/2$.

When using the TXS0206 device with MMCs, SD, and Memory Stick™ to ensure that a valid receiver input voltage high (V_{IH}) is achieved, the value of any pulldown resistors (external or internal to a memory card) must not be smaller than a 10-k Ω value. The impact of adding too heavy (i.e., <10-k Ω value) a pulldown resistor to the data and command lines of the TXS0206 device and the resulting 4-k Ω pullup / 10-k Ω pulldown voltage divider network has a direct impact on the V_{IH} of the signal being sent into the memory card and its associated logic.

The resulting V_{IH} voltage for the 10-k Ω pulldown resistor value would be:

$$V_{CC} \times 10 \text{ k}\Omega / (10 \text{ k}\Omega + 4 \text{ k}\Omega) = 0.714 \times V_{CC}$$

This is marginally above a valid input high voltage for a 1.8-V signal (i.e., $0.65 \times V_{CC}$).

The resulting V_{IH} voltage for 20-k Ω pulldown resistor value would be:

$$V_{CC} \times 20 \text{ k}\Omega / (20 \text{ k}\Omega + 4 \text{ k}\Omega) = 0.833 \times V_{CC}$$

Which is above the valid input high voltage for a 1.8-V signal of $0.65 \times V_{CC}$.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TXS0206YFPR	ACTIVE	DSBGA	YFP	20	3000	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM	-40 to 85	(3T2 ~ 3TR)	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
